ABSTRACT

Choosing the right course is one of the biggest challenges students face during their academic journey. Many students are unsure about which courses match their interests, existing skills, educational background, and long-term career goals. The **Course Recommendation System** is developed to simplify this decision-making process by providing personalized course suggestions based on user preferences and eligibility. The system considers important factors such as interests, prerequisites, skill level, academic qualifications, and career objectives to recommend the most suitable courses. It also allows users to search, filter, and compare different courses with ease through a simple and user-friendly interface. By offering accurate and relevant recommendations, the system helps students make informed decisions, reduces the time spent searching for suitable courses, and minimizes confusion. Overall, the Course Recommendation System supports students in selecting the right learning path, improving their knowledge, enhancing their skills, and achieving their academic and professional goals more effectively.
